

# Construction & Engineering

A global response at a glance

The Global Construction & Engineering team strongly believe in providing solutions for our clients and working in partnership to develop and sustain long term relationships.

## Why Charles Taylor Construction & Engineering?

**We combine operational excellence, sector specific global coverage and unrivalled expertise to assist all stakeholders, be they clients, brokers or insurers, to either an annual cross class or project specific policy placement.**

We have the strength in depth and capacity for a truly global solution, combined with critical mass to respond to any regional catastrophe.

Whilst founded on large, complex losses, we recognise the need to provide for stakeholders' global requirements for ground up solutions and have responded through continuing investment in both people and systems.

We continue to grow both organically and through acquisition. We are committed to the sector, actively maintaining a sustainable service through the development of industry experienced personnel through to CILA (or equivalent) qualification and modern apprenticeships.

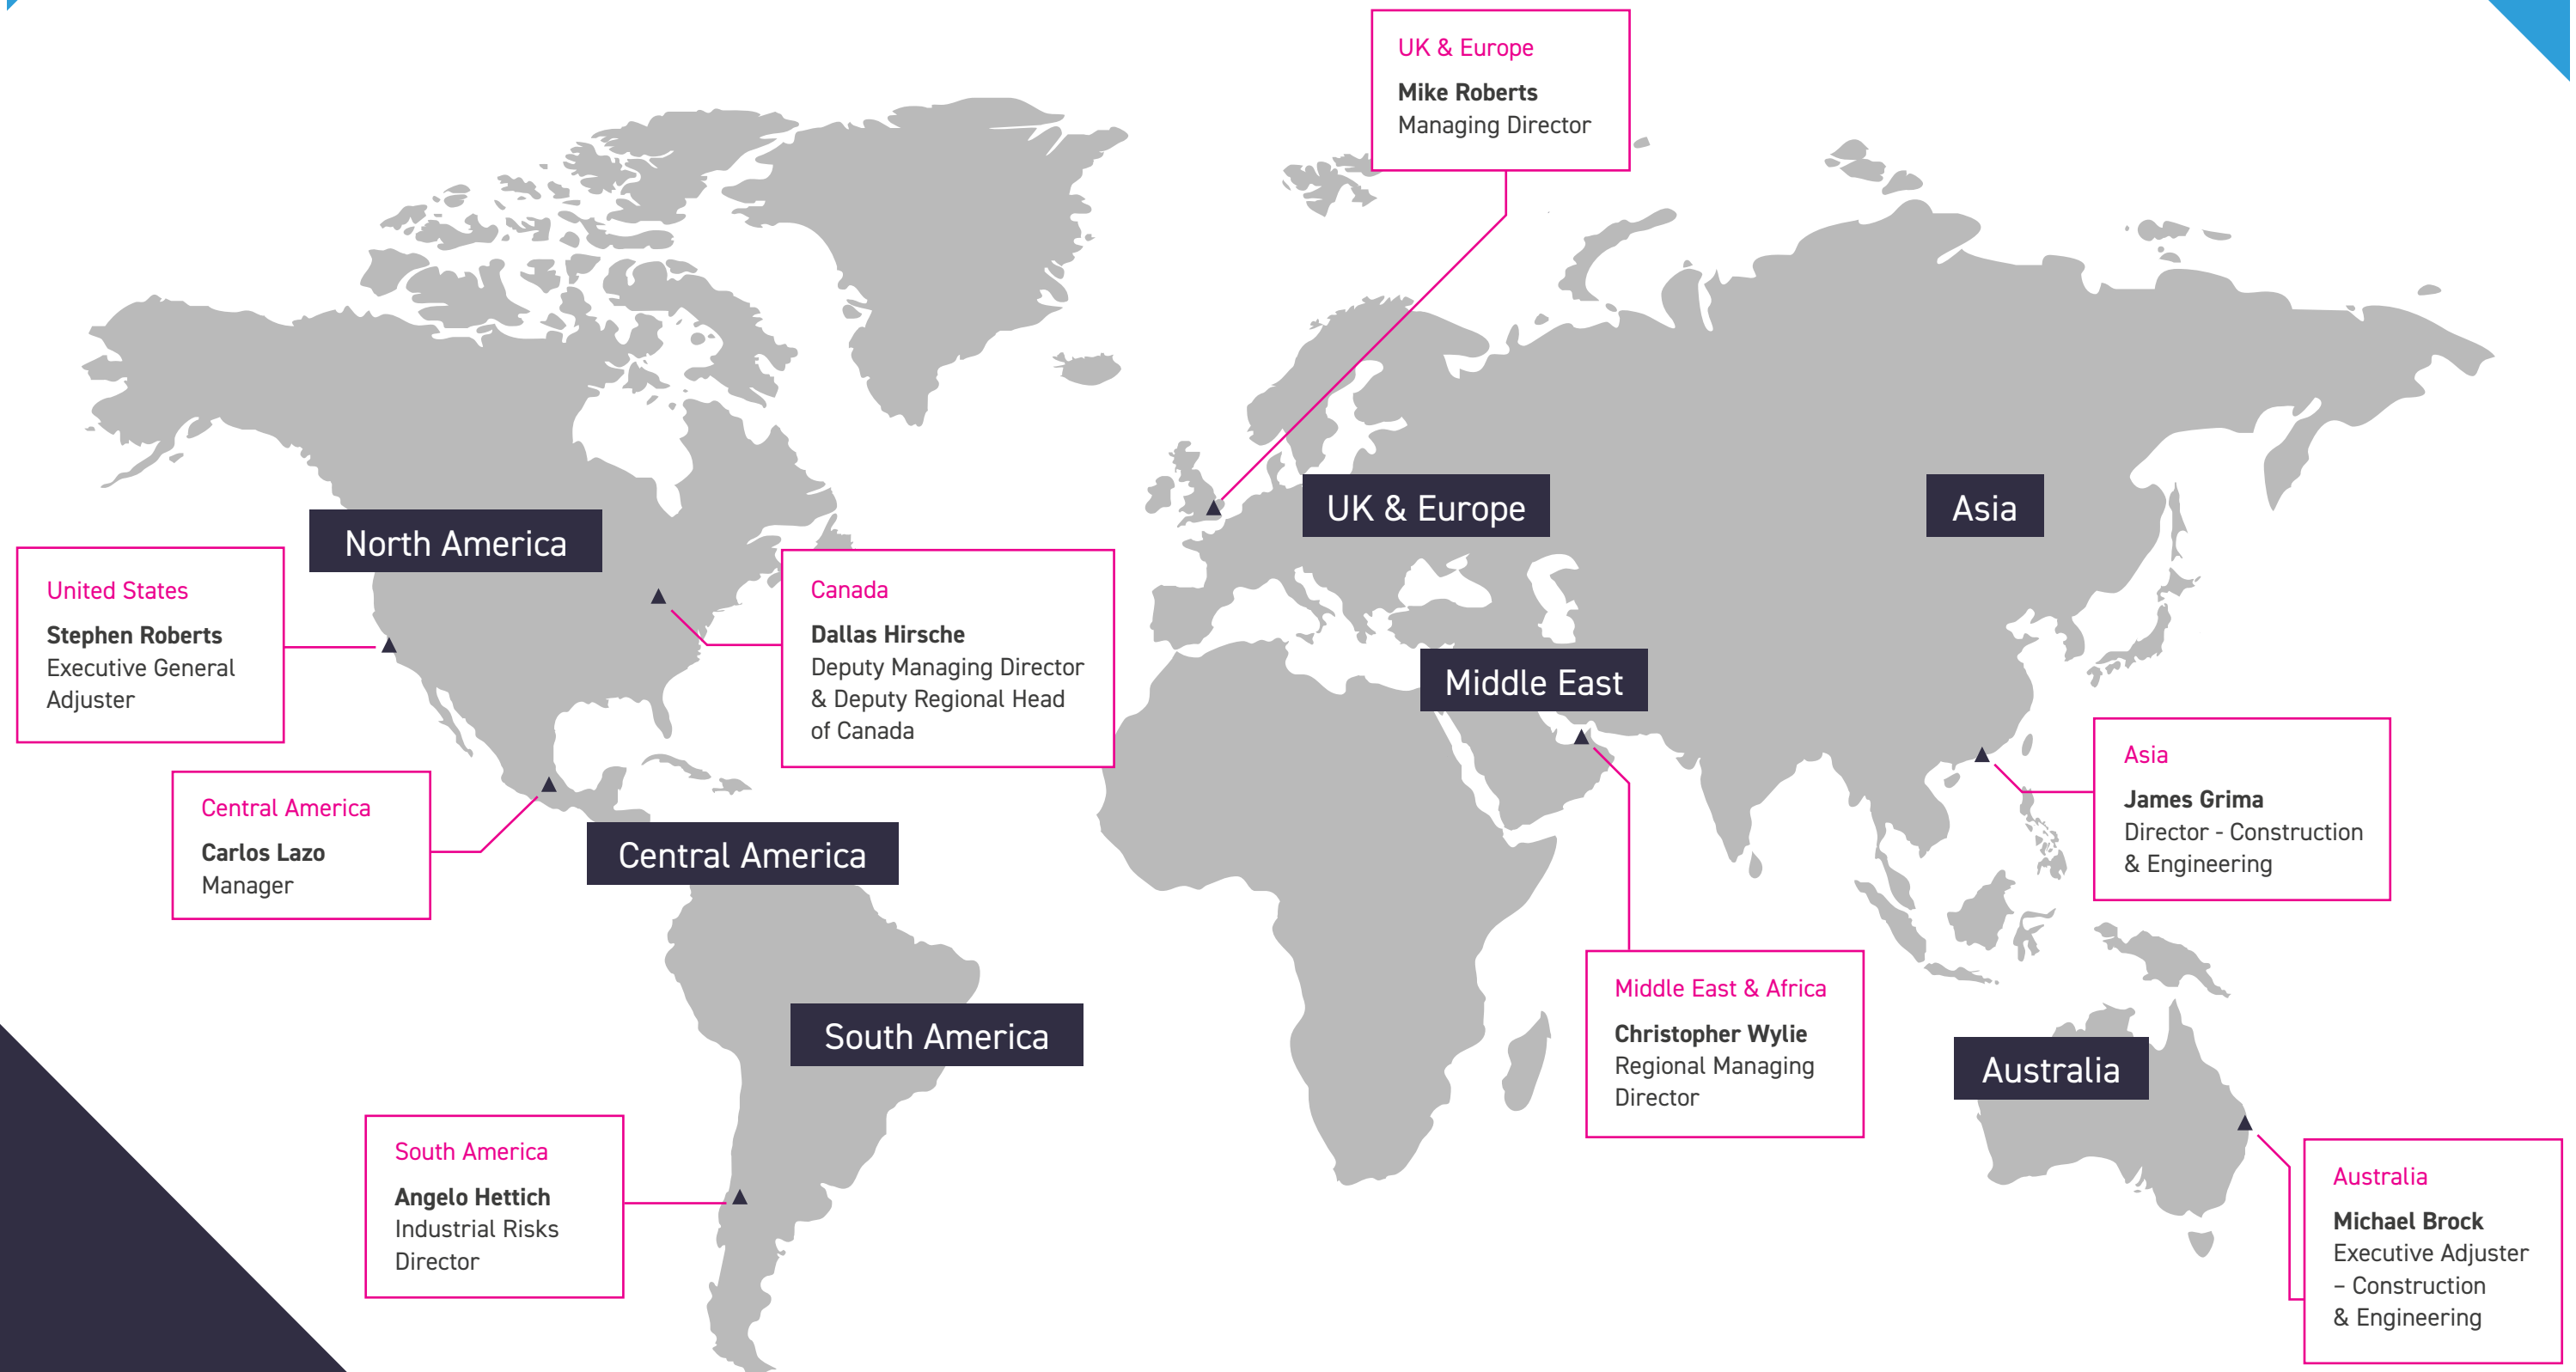

The variety of claims emanating from the sector is wide, necessitating the deployment of diverse sector specialist adjusters to project manage any loss utilising multi-disciplinary engineers, construction professionals, forensic accountants and legal experts in all jurisdictions from the wider team as necessary.

We recognise that a consistent, dedicated response is key to addressing complex issues to ensure that the indemnity spend is mitigated. We have the experience to be proportionate in our enquiries, setting timescales and roadmaps for all aspects of a claim.

Milestones are closely monitored, and our focus is always upon managing expectations from the outset whilst ensuring the earliest possible resolution.

# Construction & Engineering Key Regional Contacts

# ➤ Construction & Engineering Claims Service

Recognising the challenges of jurisdictional vagaries, plus, the importance of both local and global insurance markets, our key regional contacts act as the gateway to our worldwide resource.

Through long experience our teams understand the complications of managing both annual and project specific nominations around the world, anticipating tripartite covers for:

- **Construction/Erection All Risks**  
Contract Works and Constructional Plant
- **Business Interruption/Delay in Start Up**  
Loss of Advanced Revenue &/or Rent/  
Increased Cost of Interest Payable
- **Liability**  
Employers/Third Party & Financial Loss

We believe in front loading nominations where possible, to agree client-specific requirements in relation to first notification of loss. We do this via bespoke web-based solutions or otherwise, through to data capture and management information. Our systems are fully adaptable to ensure we deliver what is needed as opposed to what we may perceive to be required.

Building relationships allows all stakeholders to understand not only the cover available but also agreed procedures, all of which is essential to the smooth progress of any claims arising, facilitating an open approach between the parties to loss mitigation and the interpretation of contractual and policy issues.

## Sector Experience

We have a proven track record in the delivery of professional claims services for some of the largest contractors and projects across the globe across the following sectors:

- **Building Construction**  
Commercial, manufacturing, residential, retail
- **Civil Engineering**  
Airside, ports, road, rail, bridges, mining and tunnels
- **Energy**  
Encompassing onshore conventional systems to renewables
- **PPP/PFI**  
Healthcare, roads, prisons, defence infrastructure and waste to energy
